G. Boldchingis

I'm a full-stack developer focused on front-end development, passionate about building smooth and user-friendly interfaces. I like using design systems because they keep projects consistent and easy to maintain. I enjoy modern front-end frameworks that help me build features faster. My goal is to create clean, responsive, and accessible experiences that look great and work well on any device.

Work Experience

Rently | Office Rental

May 2025 - June 2025
- This project is incomplete—both frontend and backend are still in progress, though it's published and already has users. I completed the frontend UI using React, JavaScript, Tailwind CSS, and Ant Design, creating a responsive and user-friendly interface.

Pineshop e-commcerce

March 2025 - April 2025
- I built the frontend of this e-commerce website from scratch and connected it with the backend developed by my teammate. I also maintained the code written by other team members.
- I improved the website's visual appeal and interactivity, increasing user engagement by about 70% using scroll animations, hover effects, and dynamic imports for better performance.
- Additionally, I made sure the website works smoothly on all devices by optimizing responsiveness across all screen sizes and reducing load times by around 30%.

Restaurant QR menu

April 2025 - June 2025
- Designed and implemented the full admin interface using Next.js, TypeScript, and Tailwind CSS. This section enables restaurant managers to add, edit, and remove menu items, manage orders, and generate QR codes for easy customer access. I connected the frontend with the backend using GraphQL queries and mutations to handle data fetching and updates efficiently.
- Maintained code quality and reliability by setting up ESLint and writing comprehensive unit tests with Jest. Also implemented end-to-end testing with Cypress to ensure the admin workflows function correctly across the application.
